1 - Introduction

I go by the name, Ima Trader, and I'm a Trader. See what I did there? Anyway, I am a Market Speculator and if you are starting to read this book then that probably means you are too. I have spent the last several years learning how to trade the markets effectively. I bounced from concept to concept without any success, until I came across the Inner Circle Trader's concepts. After spending the time in my own charts and trying to disprove his concepts without any luck, I learned how the markets actually book price and how to trade them. My hope for you is that you will spend the time in your own charts and learn to trade successfully too.

Thank You Inner Circle Trader (ICT)

I want to take a quick minute and Thank the Inner Circle Trader, referenced throughout this book as "ICT", Michael J. Huddleston. Through spending countless hours studying all of his Free teachings on his YouTube Channel [@InnerCircleTrader](#) and through his daily tweets on Twitter [@I AM The ICT](#), I have learned his Smart Money Concepts and became a profitable Market Speculator.

**** I am NOT the originator or creator of these concepts and do NOT in any way take credit for that. These concepts were made public by the Inner Circle Trader, Michael J. Huddleston, and this book is meant to be used as a study guide to assist you in learning his concepts. ****

How To Best Use This Book?

As you may know, there is a steep learning curve with ICT's teachings and my hope for you reading this book, is that you can use this book as a study guide while going through his YouTube Channel content. That is how I studied and learned his concepts and why I made this short study guide. I know it will be of great value to you as you learn his concepts too.

This book is a collection of many of the ICT Trading Models. You should always have the perfect image of your Trading Model next to you while trading for quick reference. I was going to write a bunch of information on each of the Trading Models, but its pretty self explanatory.

This book is to be used as a quick reference guide to help supplement the teachings of ICT on his YouTube channel. This book will give you a basic understanding of what many of the ICT Trading Models should look like. This is NOT Financial advice or a signal service, so if you take any trades based on any of the models in this book, you are 100% responsible for that. For more information, go to the 2022 Mentorship playlist on ICT's YouTube Channel.

Additional Learning

You can find more examples and live chart markups using other ICT Concepts on my YouTube channel at www.youtube.com/@ImaTrader4Life. I also post a lot of daily, weekly and quarterly recap videos there as well.

To further your studies, be sure to checkout our other ICT Study Guides at the back of the book.

2 - Terms Used in the Models

Terms:

HTF = Higher Timeframe

LTF = Lower Timeframe

BOS = Break of Structure

MSS = Market Structure Shift

FVG = Fair Value Gap

IDM = Inducement

OTE = Optimal Trade Entry

POI = Point of Interest

Discount/Premium = Refers to the Premium & Discount levels of the PD Array Matrix

Displacement = Is a significant and energetic price movement in the market, indicating a strong conviction to move the price either higher or lower. It is important for the displacement to be obvious and not just a small, lethargic move.

SMT = Smart Money Tool (Divergence between two different assets)

LIQ Grab = Liquidity Grab

EQ = Equilibrium

EQH = Equal High's

EQL = Equal Low's

Buyside Purged = Taking out Buyside liquidity

Sellside Purged = Taking out Sellside liquidity

BB = Breaker Block

VI = Volume Imbalance

PT = Profit Target

In the next chapter we are going to dive right into the Trading Models, starting with Model 1: HTF + BOS + FVG (Bullish).

3 - Model 1: HTF + BOS + FVG (Bullish)

Model 1: HTF + BOS + FVG

Model 1: HTF + BOS + FVG

Model 1 Variation: Failed Swing

17 - NY Open Setups - Checklist / A+

NY Open Macro

Framework:

- **Session:** NY-AM
- **Time frame:** 1m
- **Time:** 09:30 NY Equity Open
- **Trade Plan:**
 - Between 09:30-09:40, price will either seek out liquidity or rebalance an imbalance
 - Find an entry PD Array between 09:40-09:50 in the opposite direction of the manipulation
 - Between 09:50-10:10 the macro will either:
 - Seek out liquidity
 - Rebalance an imbalance

General Checklist:

- ☐ 09:30-09:40 takes to a form of liquidity
 - ☐ Recent high/low was swept, or
 - ☐ HTF FVG was rebalanced
- ☐ In the opposite direction of the manipulation:
 - ☐ A suitable MSS formed
 - ☐ A suitable PD Array for entry formed
- ☐ Risk/Reward Ratio $\geq 1:2$
- ☐ Profit Target ~ 10 pts

NY Open Macro: A+ Setup

Checklist: A+ Setup

- ☐ 09:30-09:40 takes out a form of liquidity
 - ☐ Manipulation is in one clear direction
 - ☐ Liquidity is a HTF level
 - ☐ Price manipulates above (**short**) or below (**long**) the 08:30 **Opening Price**
- ☐ In the opposite direction of the manipulation:
 - ☐ A suitable MSS formed
 - ☐ Entry PD Array is a **FVG + BB**
- ☐ Order Flow's PD Arrays are respected
- ☐ Risk/Reward Ratio $\geq 1:2$

18 - NY Open Setups A- / B

NY Open Macro: A- Setup

Checklist: A- Setup

- ☐ 09:30-09:40 takes out a form of liquidity
 - ☐ Manipulation is in one clear direction
 - ☐ Liquidity is a HTF level
 - ☐ Price is already above (**short**) or below (**long**) the 08:30 Opening Price
- ☐ In the opposite direction of the manipulation:
 - ☐ A suitable MSS formed
 - ☐ Entry PD Array is a **FVG** or **FVG + BB**
- ☐ Order Flow's PD Arrays are respected
- ☐ Risk/Reward Ratio $\geq 1:2$

NY Open Macro: B Setup

Checklist: B Setup

- ☐ 09:30-09:40 takes out a form of liquidity
 - ☐ Price takes out bsl + ssl at Open but takes out one side more prominently by
- ☐ 09:40
 - Price is already above (**short**) or below (**long**) the 08:30 Opening Price
- ☐ In the opposite direction of the manipulation:
 - ☐ A suitable MSS formed
 - ☐ Entry PD Array is a **FVG** or **VI**
- ☐ Order Flow's PD Arrays are respected
- ☐ Risk/Reward Ratio $\geq 1:2$

22 - Market Maker Buy Model (MMBM)

Market Maker - Buy Model

Market Maker - Buy Model

"Phases of the Market Maker Buy Model"

Original Consolidation: Range bound price action which engineers buyside liquidity.

Distribution: Price expands away from consolidation and allows sell with anticipation for price to make next leg lower into established discount array.

Smart Money Reversal: Long-term low is put in at a higher timeframe discount array;
Market structure shifts bullish allowing higher prices to be delivered.

Accumulation: 1st and 2nd leg provide optimal long entries as price pushed higher.

Completion: Market trades above original consolidation highs to run buy stops.

23 - Market Maker Sell Model (MMSM)

Market Maker - Sell Model

Market Maker - Sell Model

"Phases of the Market Maker Sell Model"

Original Consolidation: Range bound price action which engineers sellside liquidity.

Accumulation: Price expands away from consolidation and allows buy with anticipation for price to make next leg higher into established premium array.

Smart Money Reversal: Long-term high is put in at a higher timeframe premium array; Market structure shifts bearish allowing lower prices to be delivered.

Distribution: 1st and 2nd leg provide optimal short entries as price pushes lower.

Completion: Market trades below original consolidation lows to run sell stops.

25 - Optimal Trade Entry (OTE)

Optimal Trade Entry (OTE)

Optimal Trade Entry (OTE)

Fib Levels

Style	Coordinates	Visibility
☒ 0	☐	☒ 0.705
☒ 1	☐	☒ 0.62
☒ -0.5	☐	☒ 0.79
☒ -1	☐	☒ 0.5
☒ -1.5	☐	☐ 0.705
☒ -2	☐	☐ 1.272

Optimal Trade Entry (OTE) is a simple pattern recognition approach that focuses on finding the best entry point for a trade between specific retracement levels. It usually occurs between 8:30 AM and 11:00 AM New York local time. OTE is based on the idea of identifying a shift in market structure and then entering the trade at a retracement level, typically between 62% and 79%. It's important to note that the Fibonacci retracement levels are not the magic answer but rather a visual representation of a short-term oversold or overbought condition relative to a specific dealing range.

26 - Power of 3 (PO3)

Power of 3 (PO3)

Power 3 (po3) is a concept taught by ICT that relates to the Daily Open, High, Low, and Close bar on a daily chart. It focuses on capturing the bulk of the daily range by buying near the opening on an up day and exiting on the close.

Power of 3 (PO3)

When you're bullish, you want to be buying near or below the opening price, which allows the range to expand and results in a higher close. Power 3 consists of three phases: accumulation, manipulation, and distribution, which can be applied to daily and weekly ranges, as well as morning and afternoon sessions.

27 - Turtle Soup

Turtle Soup

Conditions

- Price bounce prior to reaching HTF PD Array creating "false bottom"
- Price sweeps lower entering HTF PD Array (point of interest)
- Those early to position stopped out
- Offset accumulation / distribution occurs (smart money orders paired here)
- The intent is to buy the sell stops if long OR sell the buy stops if short
- We anticipate SMT divergence with correlated pair

Turtle Soup

27 - Sick Sister Model

Sick Sister

Consolidating PA Trading Strategy

Sick Sister is similar to SMT but not completely the same. By using Sick Sister theory we can target Relative EQH/Low that gets generated in a pair that fails to do SMT.

We use it in 3 pairs

1. ES / **US500**
2. NQ / **US100**
3. YM / **US30**

Tips-

When either TWO of these 3 pair takes out an old **High/Low**, its reasonable to expect in a symmetrical market the pair that failed to take out H/L to do the same later in Time.

The pair that didn't take out the high/Low we will wait for that pair to Drop/Rise into deep **Discount/Premium** & after that we can expect a run again that will target failed SMT- EQH/EQL.

★ Focus on the weakest pair.

High Probability Target:

The swing H/L where price failed to make SMT. Target will be those EQH/Low because price may want to rejoin other pairs after that.

27 - Entry Types

Entry Types

28 - Stop Loss Types

Stop Loss Types

29 - Conclusion

This concludes all the ICT Trading Models that you should be aware of at the time of this writing. Please go subscribe to [@InnerCircleTrader](#) on YouTube or follow [@I AM The ICT](#) on Twitter for more information and to further study his concepts.

Additional Learning Opportunities

You can find more examples and live chart mark-ups using other ICT Concepts on my YouTube channel at www.youtube.com/@ImaTrader4Life. I also post a lot of daily, weekly and quarterly recap videos there as well.

Recommended Study Guides on Amazon

The ICT Student's Guide To PD Arrays: Based on the Teachings of the Inner Circle Trader by Ima Trader

For Smart Money to accumulate positions they have to short in a premium and buy in a discount.

But why?

Well, for them to efficiently accumulate their positions they must do literally the opposite of what a retail minded trader would do.

When the market is in a premium, it means that the market has been trading higher, so retail looks at that as a bullish market environment, so they buy. This provides smart money with the opportunity to get short and use the retail buyers as the required liquidity to fulfill their sell orders.

When the market is in a discount, it means that the market has been trading lower, so retail looks at that as a bearish market environment, so they short. This provides smart money with the opportunity to get long and use the retail sellers as the required liquidity to fulfill their buy orders.

The PD Array Matrix is a concept mentioned in ICT's teachings, which refers to the

hierarchy of certain price levels, ranging from the highest form of a Premium Array to the lowest form before reaching equilibrium. These levels help traders identify key price levels and form a directional bias in their trading strategies.

In this book, we'll explain how all the current PD Array's work and how to spot them on your charts.

- Old High/Old Low
- Rejection Blocks
- Order Blocks
- Fair Value Gaps
- Breaker Blocks
- Mitigation Blocks
- Propulsion Blocks
- Vacuum Blocks
- And More...

Available on Amazon: <https://www.amazon.com/dp/B0C6BMLMDG>

The ICT Student's Guide To Daily & Weekly Bias: Based on the Teachings of the Inner Circle Trader by Ima Trader

Higher Timeframe analysis is something good traders do everyday before the trading day starts.

To form a weekly bias, you should start by using a top-down approach. Look at the weekly candle and determine if it's likely to expand higher or lower. This will help you solve 80% of your bias problem. Analyze the weekly chart, focusing on the seasonal tendencies, quarterly shifts, and monthly biases to align your weekly profile with the underlying momentum and institutional order flow.

To form a daily bias, you should analyze the market using various elements learned from ICT's teachings. A daily bias is not about buying or selling every day, but rather waiting for specific conditions to meet your expectations. Keep in mind that a daily bias is not always perfect, and it's essential to gain experience and practice to improve your analysis.

In this book, we'll go through all of ICT's Weekly and Daily Market Profiles. You'll also learn the Futures Daily Session Profiles and how to use all of these templates in your trading.

Available on Amazon: <https://www.amazon.com/dp/B0C6S88WQ8>

Thank You

As we reach the end of this book, I want to say thank you for reading this book.

I want to get this information out to as many people as possible. If you found this book helpful, I would greatly appreciate you leaving me a review. This helps others find the book as well.

Dedication

I want to thank my friends and family for their support and especially my two daughters, Sydney and Ava. Without your sacrifice of allowing me the time to work in my office for countless hours going through training courses, marking up my charts, listening to me talk about “Smart Money Concepts, Breakers, Fair Value GAPS, Order Blocks and New Week Opening Gap’s”, just to name a few, this would not have been possible. Through your support and encouragement, you continually drive me to be the best father, businessman and Market Speculator that I can be. I love you both very much and always remember to not be afraid to give yourself everything you’ve ever wanted in life, but it takes great effort, determination, unwavering belief in yourself and personal sacrifice to achieve your dreams. I have no doubt you both will change the world and I want to thank you for allowing me to do my part.

Disclaimer

Forex & Futures Risk Disclosure:

The National Futures Association (NFA) and CFTC (Commodity Futures Trading Commission), the regulatory agencies for the Forex and Futures market in the United States, require that customers be informed about potential risks in the Forex & Futures markets. If you don't understand and of the information provided in this book, please contact us or seek advice from an independent financial advisor.

Risk associated with Forex Trading Off-exchange Foreign currency trading on margin carries a high level of risk and may not be suitable for all investors. The high degree of leverage can work against you as well as for you. Before deciding to invest in foreign exchange you should carefully consider your investment objectives, level of experience and risk appetite.

The possibility exists that you could sustain a loss of some or all of your initial investment and, therefore, you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with off-exchange foreign currency trading and seek advice from an independent financial advisor if you have any doubts.

Market Opinions:

Government Required Risk Disclaimer and Disclosure Statement:

CFTC RULE 4.41 – HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS. UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL TRADING. ALSO, SINCE THE TRADES HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF

LIQUIDITY. SIMULATED TRADING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN.

Trading performance displayed herein is hypothetical. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. One of the limitations of hypothetical performance trading results is that they are generally prepared with the benefit of hindsight.

In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual trading results.

U.S. Government Required Disclaimer – Commodity Futures Trading Commission Futures and Options trading has large potential rewards, but also large potential risk. You must be aware of the risks and be willing to accept them in order to invest in the futures and options markets. Don't trade with money you can't afford to lose. This is neither a solicitation nor an offer to Buy/Sell futures or options. No representation is being made that any account will or is likely to achieve profits or losses similar to those discussed on this web site. The past performance of any trading system or methodology is not necessarily indicative of future results.

Trade at your own risk. The information provided here is of the nature of a general comment only and neither purports nor intends to be, specific trading advice. It has been prepared without regard to any particular person's investment objectives, financial situation and particular needs. Information should not be considered as an offer or enticement to buy, sell or trade.

You should seek appropriate advice from your broker, or licensed investment advisor, before taking any action. Past performance does not guarantee future results. Simulated performance results contain inherent limitations. Unlike actual performance records the results may under or over compensate for such factors such as lack of liquidity. No representation is being made that any account will or is likely to achieve profits or losses to those shown.

The risk of loss in trading can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition.

If you purchase or sell Equities, Futures, Currencies or Options you may sustain a total loss of the initial margin funds and any additional funds that you deposit with your broker to establish or maintain your position. If the market moves against your position, you may be called upon by your broker to deposit a substantial amount of additional margin funds, on short notice in order to maintain your position. If you do not provide the required funds within the prescribed time, your position may be liquidated at a loss, and you may be liable for any resulting deficit in your account.

Under certain market conditions, you may find it difficult or impossible to liquidate a position. This can occur, for example, when the market makes a “limit move.” The placement of contingent orders by you, such as a “stop-loss” or “stop-limit” order, will not necessarily limit your losses to the intended amounts, since market conditions may make it impossible to execute such orders.
